

SEMINAR aus Halbleiterphysik und Nanotechnologie

Di, 9.5.2017, 10:30 Uhr, Hörsaal für Physik

“Exploring Nano-Chemistry and Quantum Physics on Surfaces with a Scanning Tunnelling Microscope“

Prof. Dr. J. Kröger

Institut für Physik, Technische Universität Ilmenau, Deutschland

Scanning tunnelling microscopy has considerably influenced our understanding of processes at the nanometre scale. The capability of a scanning tunnelling microscope (STM) to image surfaces with atomic resolution and to manipulate matter atom by atom has opened avenues to exploring the nano-cosmos. The talk will illustrate the opportunities of an STM by presenting recent findings on single-molecule chemical reactions [1], a novel confinement mechanism for surface-localized electrons [2], and Andreev reflection at single-molecule contacts [3].
